PROFILE

React Native engineer with **3.5 years** building production apps for enterprise and consumer markets. I go deep where most mobile devs stop native Android modules, BLE, background services, offline-first architecture and I've taken projects from zero to live on both stores.

SKILLS

Languages: TypeScript, JavaScript

Frontend: React Native, Expo, React, Next.js, TanStack Start

Mobile Engineering: New Architecture, Native Modules, BLE, Offline-First Apps, Background Services

State & Storage: Redux Toolkit, TanStack Query, MMKV

Backend: Node.js, Elysia.js, REST APIs, WebSockets

Tools: Xcode, Android Studio, App Store Connect, Play Console, Figma

WORK EXPERIENCE

Giriraj Digital, Software Engineer

May 2025 – Present | Ahmedabad, India

- Delivered 8 production React Native + TypeScript apps across sales, field service, IoT, and marketing domains, serving 1000+ enterprise users across Play Store and App Store.
- Architected a cross-project frontend foundation application-agnostic Redux store, extracted API layer as a reusable package, and a shared component/hook library via yalc, adopted across 3+ projects.
- Built an Android native call-logging overlay using BroadcastReceiver, ForegroundService, and SYSTEM_ALERT_WINDOW to render UI in killed app state similar to Truecaller.
- Diagnosed a production UI lockup from AsyncStorage on a 10k-item payload; migrated to MMKV, drove backend pagination, optimized lists with FlashList, and integrated ML Kit for OCR-based odometer and face verification.

Silent Infotech Pvt Ltd, Programmer Analyst

Jan 2023 – Apr 2025 | Ahmedabad, India

- Led end-to-end development of a subscription-based clothing marketplace (React Native), from architecture through Play Store deployment.
- Optimized an automated trading platform by reducing bundle size by 50% and delivering key UI improvements.
- Migrated an ERP system from Ionic to React Native, integrating Redux and an offline-first architecture.
- Built a cross-platform Expo app (Android, iOS, web) with a dedicated NPM package encapsulating API services, Redux Persist state, and modular UI components including kanban, tree, and form views.

PROJECTS

Prompt to Figma,

AI-powered Figma plugin converting natural language prompts into production-ready designs via LLM APIs.

- Built a TypeScript rendering engine supporting 8 node types (frame, text, icon, component, instance, etc.) with full styling, gradients, effects, Auto Layout, and a two-pass hierarchy builder for reusable component systems.
- Architected a CORS-free bridge pattern where the UI iframe posts AI requests to the main thread for CORS-free fetch and figma.clientStorage persistence, with live model catalog fetching from /v1/models.
- Added a Node.js smoke test suite in a VM harness that validates the entire bridge, asserts no direct fetch from UI, and verifies request/response correlation with requestId.

Freshina DMS

- Enterprise dairy supply chain CRM serving 100+ field agents across India. React Native 0.80, TypeScript, Redux Toolkit, Kotlin, Frappe/ERPNext.
- Built a real-time driver tracking module with a custom Kotlin Android foreground service (60–120s GPS intervals), Room DB offline cache, WorkManager retry queues, and Ola Maps SDK with encoded polyline decoding. Implemented CSRF-authenticated native-to-JS bridge for state-sync across trip lifecycle (Accept -> Start -> InTransit -> OTP verified Delivery).
- Architected a scalable Redux generic slice factory (createGenericSlice) with centralized API middleware, co-located screen/hook separation, and Redux Persist. Integrated 450+ Frappe/ERPNext endpoints with dual CSRF + token auth, handling 20+ analytics dashboards (cash collection, delivery performance, team-level breakdowns) and Razorpay payments with OTP verification.

EDUCATION

B.E. Information Technology - SSGEC Bhavnagar, 2023 · CGPA 8.0
